DETAILED ACTION

1. This action is responsive to the Applicant's response filed 2/28/2011.

As indicated in Applicant's response, claims 1, 3-15, 18, 20 have been amended.

Remaining claims 1, 3-15, 18, 20 are pending in the office action.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

2. Claims 1, 3-15, 18 and 20 are allowed.

The following is an examiner's statement of reasons for allowance.

The **prior art** taken separately or jointly does not suggest or teach the following features.

A system or method for executing a bytecode program having unit to judge whether a bytecode is already in its native form for invocation, with first unit to instruct the processor to interpret and execute a target bytecode, then to compile it to target code, and a second unit to instruct the processor to execute the native resulting from said compiled native form; including

a third unit operable to instruct said processor **A**) to compile a bytecode set indicated by a compilation request issued by said first unit, in parallel with (i) the bytecode interpretation and execution by said first unit and (ii) the native code execution by said second unit,

wherein said program execution control device operates **B**) under control of a multitask operating system, wherein the compilation by said third unit is executed as a separate task from the bytecode execution by said first unit and the native code execution by said second unit, wherein the tasks of said first and second units are assigned a higher priority level than a priority level assigned to the task of said third unit, and wherein said program execution control device further comprises:

a priority information acquiring unit operable to acquire information showing a priority level of each bytecode set;

C) a comparing unit operable to compare priority levels of (i) the bytecode set indicated by the compilation request and (ii) the instruction execution task; and a priority altering unit operable to temporarily raise a priority level of the compilation task, when the comparison

shows that the priority level of the bytecode set indicated by the compilation request is higher than the priority level of the instruction execution task;

All of which as set forth in claims 1, 18, 20

3. **Holzle**, USPN: 6,240,548, alone or in combination with APA or Shaylor (2002/0104076) does not teach or render obvious, the third unit operating in conjunction with first and second unit as set forth in **A)** for a parallel interpretation and execution, wherein first, second and third unit operates as task in a multi-task OS as in **B)**, the third unit having a task priority lower than that of the first and second unit, such that as in **C)** via comparing priority of bytecode set and priority of execution task, a altering unit can temporarily raise a priority level of the compilation task when compilation request is determined as higher that the instruction execution task.

Holzle discloses priority of compilation with respect to a execution list and a database method list and determination for the task of compiling the execution list methods when compared to compiling database list of methods would give priority to the more expedient execution list as opposed to compiling the more repetitive nature of the methods in the database list which would be pending further overhead; hence does not amount to A) B) and C). APA or Shaylor does not remedy to the combination not taught in Holzle, even by way of obviousness.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
